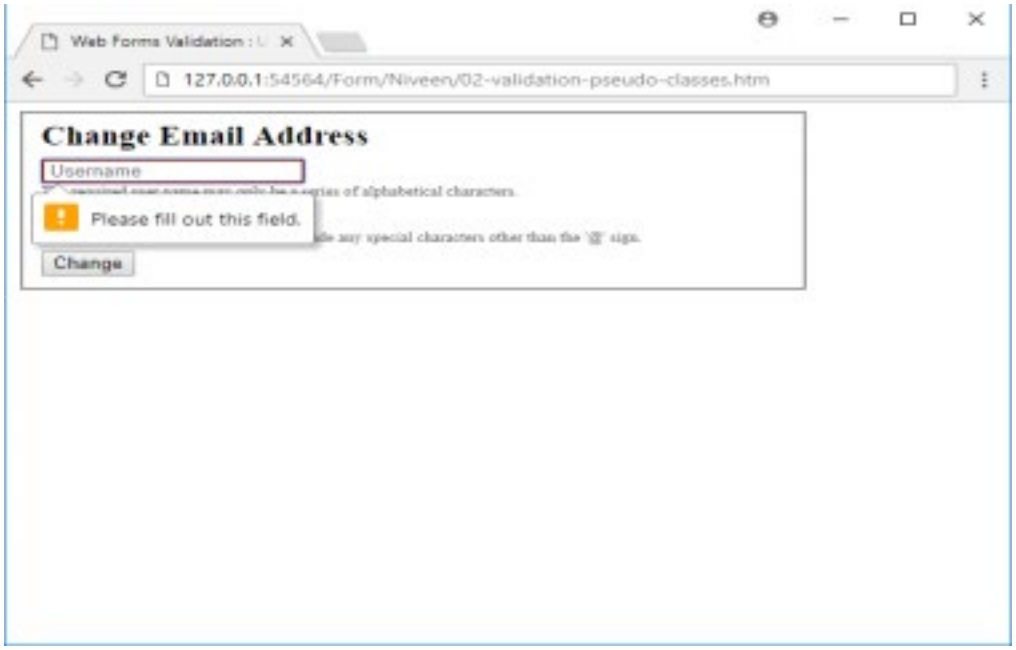
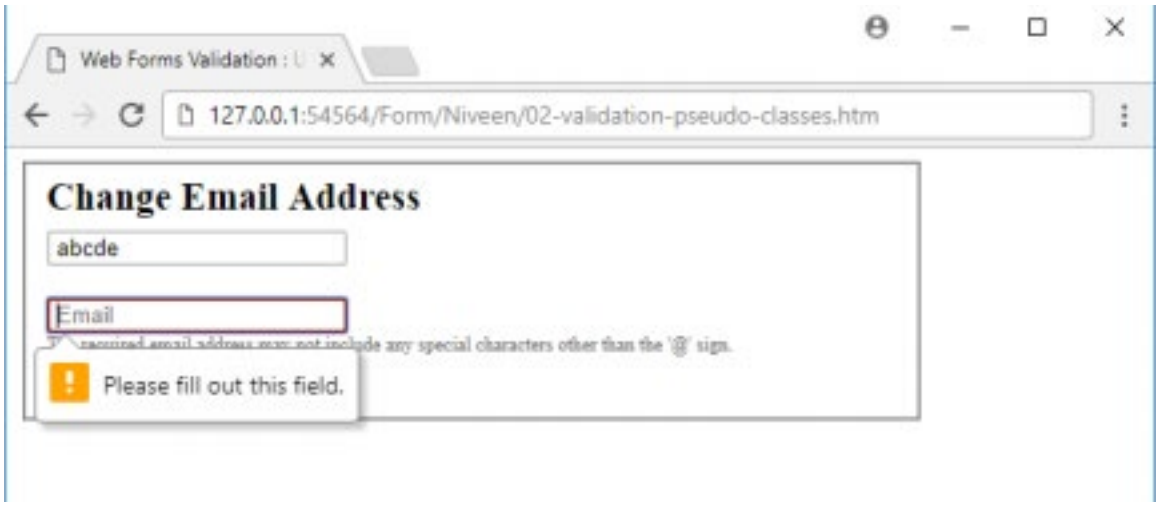
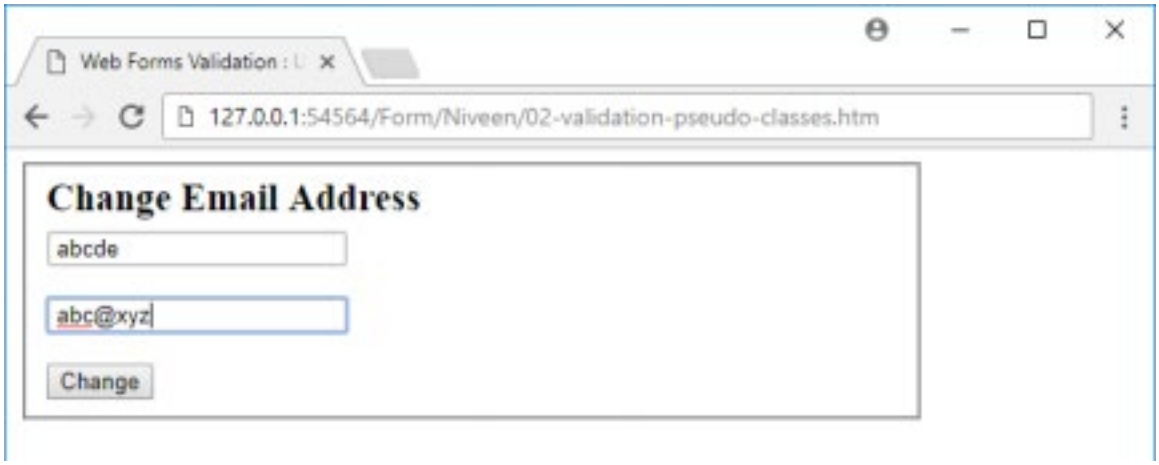
HTML5 lab1

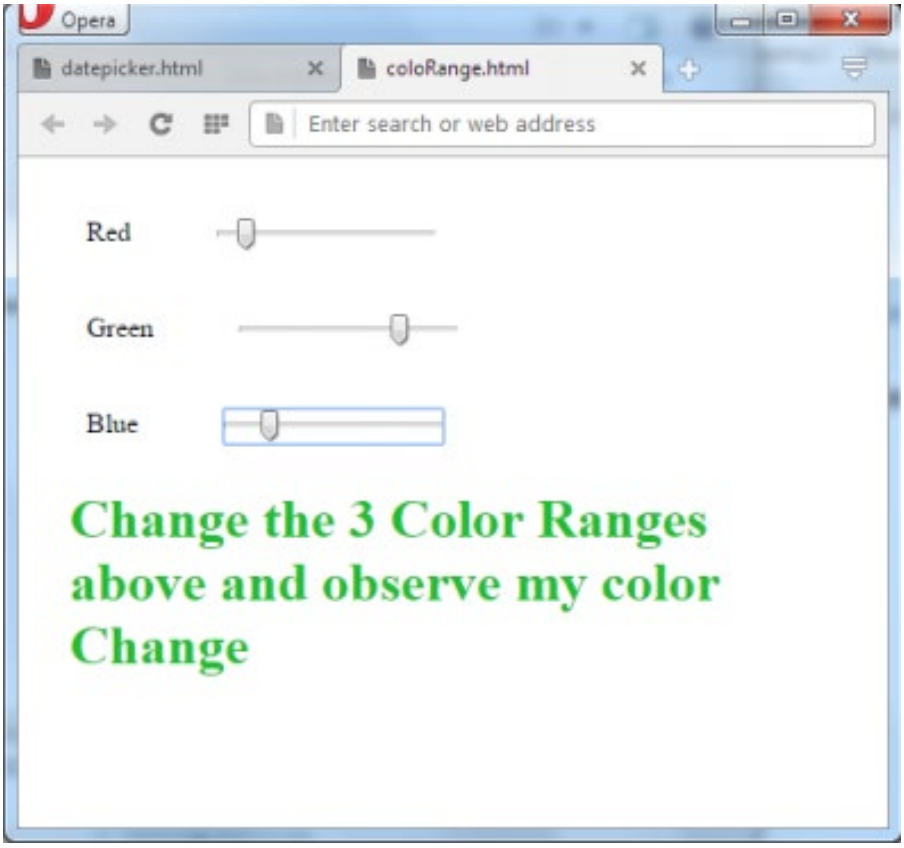
1. **Implement the given form and apply validation of its field via new HTML5 markups.**







2. In the login form assignment, use local storage to save user name by add “remember me” check box, and save user name if the user checked this checkbox, and press login button, then retrieve it on page load and write it to the textbox.
   and if the user didn’t check it, remove the saved user name local storage if they saved before



Opera
datepicker.html
coloRange.html
Enter search or web address
Red
Green
Blue
Change the 3 Color Ranges above and observe my color Change
